ABSTRACTED- PUB-NO: US 6152619A
BASIC-ABSTRACT:

NOVELTY - An ink cartridge including an ink supply and print head unit, is mounted on a core chassis, and is adapted to print on roll of print media mounted between ends of core chassis. DETAILED DESCRIPTION - An ink cartridge unit including an ink supply and print head unit, is mounted on the camera chassis, and a roll of print media is mounted between end portions of the chassis. A print head unit is adapted to print of the print media, and a platten unit is mounted below the print head unit. Image sensor and control circuitry is interconnected to the print head unit, and is adapted to sense an image for printing by the print head unit. An outer casing encloses the chassis, ink cartridge unit, print media, platten and circuitry. INDEPENDENT CLAIMS are also included for a method of storing the print media and the power supply; a print head ink supply unit, a digital handheld camera system, a system for verifying the refill of a camera system having internal ink supply and print media, a processor controlled handheld camera, a method of operation for the camera system, a print head recapping mechanism, and a test method to determine a current timing parameter value f or rescaling a timing circuit used to generate a variable clock signal.

USE - Single-use disposable camera with instant printing capabilities.

ADVANTAGE - Provides effective colour correction or gamut remapping capabilities. DESCRIPTION OF DRAWING(S) - The drawing shows a back side perspective view of the camera. (2) Plastic film jacket; (4) Image capture button; (5) Print LED; (6) Image output slot; (7) Printer-copy button; (8) Viewfinder.
